Clinic:	Premium Care	Date Received:	15/02/2026
Doctor:	Dr Chineah A.	Ref Num:	FS 26/089
Patient Name:	Leon Marie Claudia Vanessa	Age:	45yrs
		Sex:	Female
Specimen:	Trucut Biopsy Right Breast Lesion.		

## GROSS DESCRIPTION:

Three core biopsy tissue pieces ranging from 12 x 1mm to 13 x 1mm. All embedded.

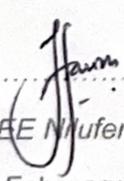

## MICROSCOPIC EXAMINATION:

Biopsies with levels comprise breast parenchyma displaying clusters and nests of malignant ductal epithelial cells infiltrating a desmoplastic to hyalinized stroma.

These malignant cells display marked nuclear pleomorphism, hyperchromasia, irregular nuclear borders and mitoses around 14/10HPF.

Features are suggestive of an **INVASIVE BREAST CARCINOMA of NO SPECIAL TYPE (Preliminary Modified BR Score 3+3+2), Grade 3.**

*Immunohistochemistry (EPC's) are kindly advised for theranostics.*
